The series of conflicts and shocks, and evolving crises have split and dispersed families in Yambio.

**This has led 1/3 of fathers and 1/4 of mothers out of the house.**

As a result, it has reduced households’ ability to positively absorb shocks and adapt to stressors and challenges.

There are virtually no mechanisms in place to help people to cope with these shocks. Till now those who are traumatized haven’t received any treatment (psychosocial support).

The Institution of Family

As a result, it has reduced households’ ability to positively absorb shocks and adapt to stressors and challenges.
For us in South Sudan here, we have everything. We have water. We have fish. We have petrol. We have diamonds and all kinds of minerals. These things make one person think that he can rule over them and also bring his tribe into power.

FGD – Male Farmers

On a household level, displacement, death and loss of household assets were the biggest impacts.

At community level, civil war, death and loss of social status have had significant impact.

According to the survey, 91% of conflicts in Yambio were successfully resolved through dialogues, mediated by traditional leaders.

Most effective Conflict Resolution mechanisms include:

- Dialogue: 100%
- Traditional Leaders: 60%
- FBO: 50%
- Alternative Dispute Resolution: 45%

Effects of conflict on households:

- Displacement: 78%
- Death: 72%
- Loss of Household Assets: 69%
- Fear of Retaliation: 50%
- Loss of Social Status: 45%

Effects of conflict on the community:

- Civil War: 88%
- Death: 80%
- Loss of Social Status: 56%
- Displacement: 48%
- Loss of Animals: 32%
